

UNICRYL quick

- Coated Braided Polyglycolic Acid B.P. Undyed and Violet.
- Synthetic rapidly absorbed sterile surgical suture composed of a homopolymer of glycolide.
- Available in range of gauge sizes and lengths, non-needled or attached to stainless steel needles of varying types and sizes.
- Minimal tissue reaction.
- Easy passage through tissue.
- Secure Knot tying and easy knot tie down.
- Intended for use where an absorbable suture or ligature is indicated for short term support. It can be used for superficial soft tissue approximation of the skin and mucosa.
- Sterilised by Ethylene Oxide.
- Coating Polyglycolic acid is a homopolymer of glycolic acid, which is braided into sutures of various sizes. The braid is coated with mixture of Calcium Stearate and Polycaprolactone.
- Sutures are guaranteed to meet the requirements of the British Pharmacopoeia (B.P.), the European Pharmacopoeia (Ph.Eur.), and the United State Pharmacopoeia (U.S.P.).
